

TrueCompare™

Enhance ID Authentication
with Facial Comparison

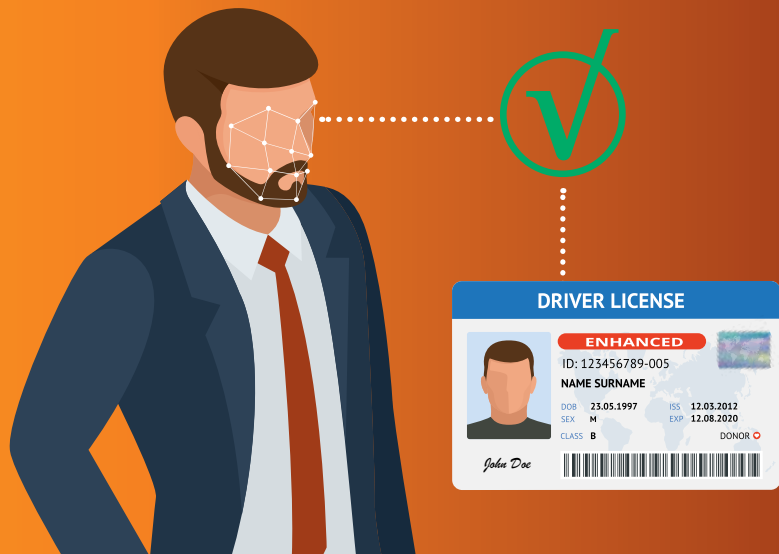

The Veridocs facial comparison module performs real-time facial comparison between an ID photo and the person presenting it. The webcam scan verifies the patron's identity by matching the biometric features to eliminate potential human error during an ID check. Our Evolution platform offers this module with an easy-to-use interface. TrueCompare can integrate with third-party systems.

- ✓ Store data within your firewall for added security
- ✓ Maintain records for audit trail
- ✓ Access support 24/7/365 with US-based services

Eliminate Human Error

Elevate your ID authentication by adding TrueCompare and be certain you know the person standing in front of you is who they say they are. Facial comparison allows for differences in age, hairstyle and other typical variations, and delivers a "match" or "no match" result that is easy for your staff to see.

Facial Comparison

Scan patron ID to verify required components.

Capture a patron's image with a webcam attachment.

Run a real-time facial comparison with document photo versus captured photo.

Quickly receive "match" or "no match" results in a user-friendly interface.

TrueCompareTM is one of six modules in the Evolution platform.
