

Mobile Digital License

Authenticate mDLs for
Enhanced Customer Service

The Veridocs mobile digital license module establishes a secure connection between the reader and the patron before data is transmitted. The electronic transmission of data uses the issuing authority's key and the patron's private key to securely authenticate the ID. This technology allows patrons to only reveal information necessary for entry while maintaining personal privacy. The mDL feature is an additional, no added cost option for our Authentication customers.

- ✓ Store data within your firewall for added security
- ✓ Maintain records for audit trail
- ✓ Access support 24/7/365 with US-based services

Smartphones serve consumers in more ways than just communication devices – they now double as digital wallets. Don't miss out on an opportunity to enhance customer service.

Mobile Digital License (mDL)

Just scan the patron's encrypted QR code or have them tap their phone.

Information is authenticated through an exchange between the verifying party and the issuing authority.

Patrons select what personal information to reveal with the facility to get admittance.

Compatible with watch list management for AML compliance.

Get quick results with a record of all scans.

Mobile Digital License is a feature in the Evolution ID Authentication module.
