

Mobile Driver's License

Authenticate mDLs for
Enhanced Customer Service

The Veridocs mobile driver's license module establishes a secure connection between the reader and the patron before data is transmitted. The electronic transmission of data uses the issuing authority's public key to securely authenticate the ID. Patrons can then choose to accept or decline whether they would like to share the requested personal information. The mDL feature is an additional, no-added-cost option for our TrueAuthentication[®] customers, but additional hardware may be required.

- ✓ Store data within your firewall for added security
- ✓ Maintain records for audit trail
- ✓ Access support 24/7/365 with US-based services

Don't miss out on an opportunity to enhance customer service. Smartphones serve consumers in more ways than just communication devices - they now double as digital wallets.

Mobile Driver's License (mDL)

Just scan the patron's QR code or have them tap their phone.

Information is authenticated locally on the scanning device.

Patrons can choose to accept or decline whether they would like to share the requested personal information.

Compatible with watch list management for AML compliance.

Get results quickly with a record of all scans.

Mobile Driver's License is a feature in the Evolution ID Authentication module.
