

Integrate ID Management Technology

Enhance Security and Customer Service Software with Veridocs

Veridocs technology enhances your software offerings with advanced ID management. Our **modules integrate seamlessly** to offer your customers streamlined hotel check-ins, player enrollment and kiosks transactions with compliance documentation.

Our technology **transforms a single ID scan** into gateway to link individual hotel guests to the same room or assist with Player enrollment protocols or reliably check in guests at an unmanned kiosk - **without manual data entry**. This saves time and increases accuracy. The scan auto populates and with a click, automatically transfers data to third-party systems and our secure database.

Collected information – names, addresses, birthdays, and more – **extends your software's capabilities into a marketing database** and a recordkeeping support for compliance, charge backs and beyond.

Hotels

Player Enrollment

TrueAuthentication®

Verify a wide array of security features unique to a particular ID against the most frequently updated database of domestic and global identification documents including passports and driver's licenses.

Watch List Screening

Screen identities against regulatory, government, proprietary and internal lists. Automate watch list management to reduce cost and complexity and send alerts to various departments.
